

## CV

I was born on 05.11.1960 in Vushtri. I finished the primary school with excellent performance in Prishtina. I graduated the secondary school, direction of Natural Sciences, with excellent performance also in Prishtina, in 1979.

After completion of secondary school I enrolled at the Faculty of Civil Engineering and Architecture in the academic year 1979/80. During my studies I have been a scholarship holder of the University of Prishtina and have been distinguished as the outstanding student of the generation.

I worked my dissertation (submitted as a diploma) about "Construction of Concrete" at the Department, Construction of Concrete, which I protected in the year 1986 with the highest grade, 10 (ten). After my graduation I got employed in the construction company "Ramiz Sadiku", where I worked until 1988, and in the same year I was accepted as an assistant at the Faculty of Civil Engineering and Architecture, in the Department of Theory of Constructions. I registered the post diploma studies at the Faculty of Civil Engineering in Zagreb, Croatia, Department of Stability of Constructions. I passed all examinations of the post diploma studies at the Faculty of Civil Engineering in Zagreb, but because of the war, which had broken out in Croatia by that time, I had to interrupt my studies.

In 1995 the post diploma studies at the Faculty of Civil Engineering and Architecture in Prishtina were open and I registered my Master studies there, while all my passed exams (in Zagreb) have been acknowledged. In 1996 I successfully protected my Master thesis "Stability of spatial girder construction made of steel", where I gained the title Master of Technical Sciences. In the board of examiners were: Prof. Dr. Afrim Vokshi, adviser, and Prof. Dr. Fetah Jagxhiu, Prof. Dr. Fikred Ahmedi, board members. In 1997, I have been elected as a lecturer at the Faculty of Civil Engineering and Architecture in Prishtina, in the Department Theory of Constructions for the subjects "The static of constructions I" and "The static of constructions II".

After a pause, I presented the PhD thesis at the Faculty of Civil Engineering of the University of Skopje in 2006, Department of Steel Constructions, with the title "Analysis of spatial girder construction made of steel under the influence of fire" which has been approved. I protected my PhD thesis on 21.07.2008 at the Faculty of Civil Engineering in Skopje with the title "Analysis of spatial girder construction made of steel under the influence of fire" in front of the board of examiners: Prof. Dr. Atanas Filipovski, adviser, and Prof. Dr. Afrim Vokshi, Prof. Dr. Meri Cvetkovska, Prof. Dr. Petar Cvetanovski, Prof. Dr. Fikred Ahmedi, board members.

Now I am working as a lecturer for the subjects "The static of constructions I" and "The static of constructions II", what I will be doing also in future.

Prishtina  
Februar, 2014

Prof.ass.dr. Fatos Pllana,
